ORGANISATION	
Name: <u>Senority Test Organisation</u>	

Portfolio Services			Portfolio Service Details:		
Organisation	Label		Value Proposition Business issues addressed by the solution: Need for additional cost reduction, Minimal CAPEX available for IT purchase, Transparent IT costs, Scale up/down flexibly, Only pay for what is used, Accelerated time to market, Need to comply to rules and regulations, Audit ability, Security to protect intellectual property, SLA driven availability / performance, Client Benefit: Benefits from increased flexibility by being able to dynamically provision compute, connectivity and storage resources. No requirement to invest in CAPEX or retain under-utilized assets. Cost reduction based on using of virtual environments, optimized with automated and off shore management. Fast provisioning of infrastructure to considerably decrease time to market. Ability to exploit new business opportunities which legacy platforms may prevent. Make use of a Secure Cloud service with agreed service levels and compliance audit ability, which implements preconditions for certifications on application layer. No hidden costs, only monthly fee - No additional setup or license / support costs.		
Applications	SAP Maintenance				
Security Test Organisation	Desktop management				
Competative Position Global Competence benchmark February 2012 and Expertise Benchmark for Germany Nov 2013 indicates CIS competes on price at the average / lower price band in the EU and NAM traditional cloud provider market. Most traditional customers are not providing an ability to scale up / down without penalty. Current public cloud providers are reluctant to enable audits of the services they provide and they don't offer Transformation services to the cloud and they don't consider customer business process integration. Canopy cloud powered by Atos is auditable compared to some public cloud provider competitors and consider integration of customer business processes as well as transferring customers IT to the cloud by Transformation services.			Scope CIS provides flexible computer processing, storage and backup services to implement productive environments and business critical applications. An appropriate secure network connection is made that allows customers to access the services. Online portal for all service requests. CIS is offered as Multi-Tenant model, fully shared resource, default connection via Internet. Minimum contract duration 12 months Options: The level of resource sharing varies and there are also differences in terms of agility. Single Tenant, partly shared resource, customer dedicated compute and connection. Disaster Recovery Option		
Target Customers Horizontal offering: it is able to provide services to all Markets, Industries and Company sizes in all geographies.			Deal Characteristics Initial average revenue: 0,2 to 100 €m Length of sales cycle: 36 months		

Performance Indicators						
Seq. ▲	Description	Unit	ScoringScale
