

Reducing Contract Value Leakage Through Active Contract Management

***Evaluator[®] AI* delivering contract benefits effectively**

Contracts are negotiated carefully, then stored away.

Enterprises struggle to surface what's actually inside their contract portfolio.

The risks obligations, SLAs, and renewal terms inside them often go unmonitored

Value Leakage Post-Signing

Organizations lose 8–11% of contract value after signing due to poor execution and monitoring.

Systemic Commercial Failure

Value loss comes from lack of ownership and enforcement, not negotiation, impacting profits and risk.

Active Contract Management Benefits

Active management assigns ownership and tracks obligations to capture value and reduce losses by 30–40%.

Profit Enablement Capability

Active contract management turns negotiated agreements into realized financial results and cash flow.

Supporting the Contract lifecycle

3

01

Upload

Drop any PDF, DOCX, or batch upload a ZIP. OCR handles scans.

02

AI Extracts

9 agents extract metadata, clauses, obligations, SLAs, risks, and renewals.

03

Dashboards

Real-time dashboards surface risks, deadlines, SLA breaches, and vendor scores.

04

Take Action

Claim credits, meet deadlines, renegotiate terms, govern relationships with data

No templates. No pre-configuration. No training required. Just upload and go.

Contract Intelligence

AI extracts metadata, 30+ clause types, and risks across 10 categories. Full semantic search across entire portfolio.

Obligation Tracking

RAG status indicators, owner assignment, escalation paths, and automated deadline alerts. Never miss a commitment.

SLA Monitoring

Real-time breach detection, service credit calculation, and vendor scorecards. Know when performance falls short.

specialized AI agents extract, analyze, and monitor everything in your contracts —

Renewal Management

Auto-renewal detection, notice period tracking, and AI-powered renewal recommendations. Stay ahead of every date.

Relationship Governance

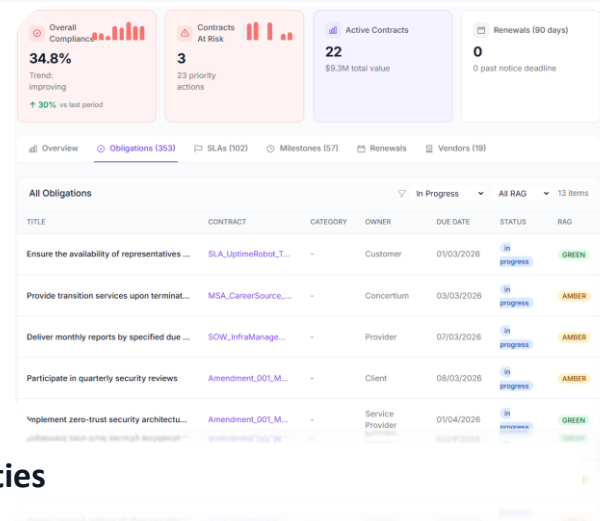

KPI perception gap analysis, vendor health scores, satisfaction surveys, and improvement tracking. Only available in Evaluator.

Enterprise Security

SOC 2 Type II, GDPR-ready, AES-256 encryption, SSO/SAML, role-based access, full audit trails.

Obligation Tracking: never miss a commitment

Missed obligations cost money, damage relationships, and create compliance exposure. Evaluetor extracts every obligation from every contract and tracks them through their full lifecycle with owners, deadlines, and evidence.

The Obligation Lifecycle

From extraction to compliance proof:

- 1 **AI Extraction** Obligations identified with deadlines, parties, and consequences
- 2 **Classification** 7 types: delivery, reporting, payment, regulatory, performance, notice, compliance
- 3 **Owner Assignment** Each obligation assigned to a responsible person with escalation path
- 4 **Status Tracking** RAG indicators (Red / Amber / Green) updated as deadlines approach
- 5 **Evidence & Audit** Compliance evidence attached for audit trails and reporting

Key Capabilities

- **RAG Status Dashboard**
At-a-glance compliance visibility across your entire portfolio. Red flags overdue items, amber shows approaching deadlines, green confirms on-track — filterable by vendor, business unit, or contract type.
- **Configurable Deadline Alerts**
Automated notifications at configurable lead times before each deadline. Alerts route to obligation owners via email, Slack, or Microsoft Teams — with escalation when deadlines are missed.
- **Compliance Reporting**
Generate compliance reports by date range, vendor, or obligation type. Track fulfilment rates over time with trend analysis. Attach evidence documents for audit readiness.

Risk Detection: see what others miss

6

Every contract carries risk, hidden indemnities, uncapped liabilities, ambiguous termination clauses.

Evalueter's AI scores and categories risk automatically so your team can focus on what matters most.

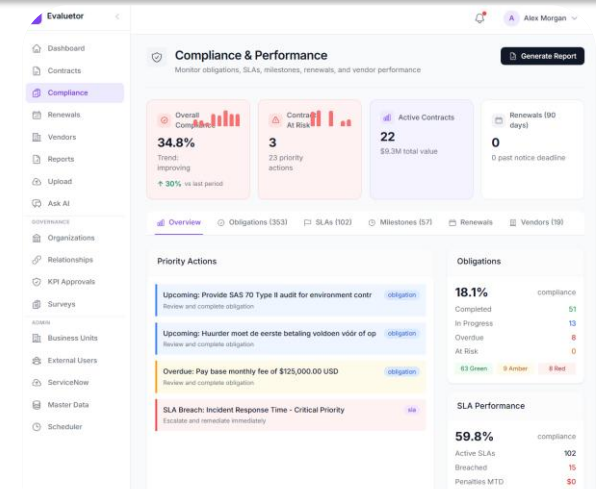

How Risk Analysis Works

Fully automated from upload to alert:

- 1 Document Parsing** Text extracted from PDF, DOCX, or scanned images via OCR
- 2 Clause Classification** AI identifies 30+ clause types across the full document
- 3 Risk Categorisation** Each clause scored across 10 risk categories
- 4 Severity Scoring** 4-level scale: Low, Medium, High, Critical with confidence
- 5 Portfolio Alerts** High-risk items surfaced on dashboards with recommended actions

Key Capabilities

- 10 Risk Categories**
Indemnification, liability caps, IP assignment, termination, confidentiality, non-compete, data protection, insurance, warranty, and force majeure — each scored with weighted severity from 0–100.
- Cross-Contract Anomaly Detection**
Knowledge graph compares terms across your portfolio and flags deviations from your norms. Example: "This vendor usually has 30-day payment terms — this contract has 45."
- Portfolio Risk Dashboard**
Aggregate risk posture across all contracts with drill-down by vendor, contract type, business unit, or risk category. Trend analysis shows whether your portfolio risk is improving over time.

SLA Monitoring: recover what you're owed

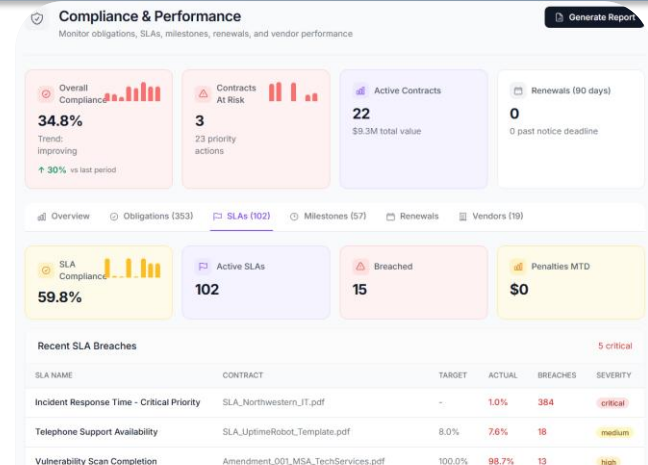

7

SLA breaches happen constantly, the challenge is detecting them. Evaluetor extracts SLA terms, compares them against actual performance, and calculates every service credit you're entitled to.

From Contract to Credit Recovery

Automated end-to-end:

- 1 SLA Extraction** AI identifies metrics, targets, measurement periods, and penalties
- 2 Performance Ingestion** Actual performance data imported via API or manual entry
- 3 Threshold Comparison** Contracted targets compared against actuals in real time
- 4 Breach Detection** Violations classified by severity: Minor, Moderate, Major, Critical
- 5 Credit Calculation** Service credits and penalties computed automatically per contract terms

Key Capabilities

9 SLA Metric Types

Uptime, Response Time, Resolution Time, Throughput, Error Rate, Availability, Latency, MTTR, and Custom metrics — each with targets, thresholds, and measurement windows extracted by AI.

Service Credit Recovery

Automatic calculation of credits owed based on breach severity and contract terms. Track recovery status from detection through claim to resolution. Customers report 3–5x more credits found.

Vendor Scorecards

A–F grade vendor ratings combining SLA compliance rate, breach frequency, financial impact, and trend direction. Compare vendor performance across your portfolio with historical benchmarking.

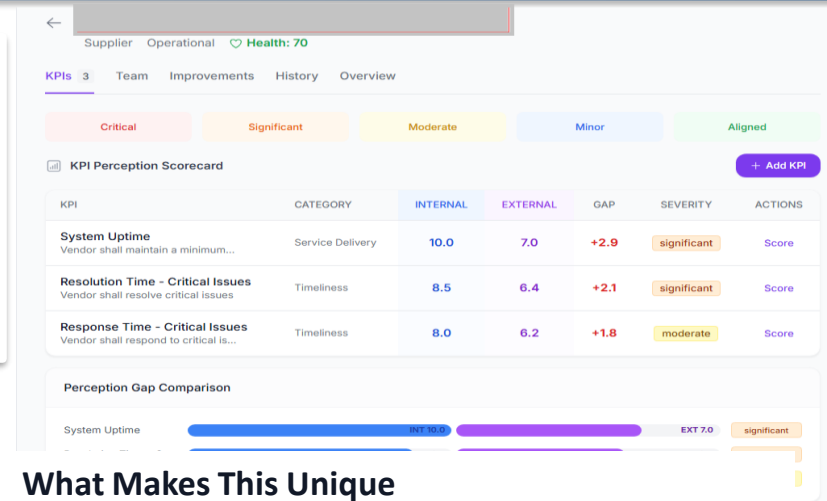

Relationship Governance: only in *Evaluator*

Most CLM platforms stop at the contract.
Evaluator goes further, automatically
connecting contract data to the business
relationships they support.
No other CLM vendor offers this capability.

The Automated Governance Bridge

Contract upload triggers a fully automated pipeline:

- 1 Contract Upload**
AI extracts parties, terms, SLAs, and obligations
- 2 Organizations**
Counterparties auto-linked to your org directory
- 3 Relationships**
Business relationships created with health scoring
- 4 KPIs & Scoring**
Performance metrics tracked with dual-perspective scoring
- 5 Improvement Points**
Gaps automatically surface with action recommendations

What Makes This Unique

Perception Gap Analysis

Dual-perspective scoring reveals misalignment between how you see vendor performance and how they see it — with severity classification that drives targeted improvement.

Composite Health Scoring

Relationship health calculated from Risk (30%), SLA Compliance (40%), and Obligation Fulfillment (30%) — a single score that tells you where each relationship truly stands.

Automated Improvement Tracking

When perception gaps exceed thresholds, improvement points are auto-generated with ownership, priority, and action items. From insight to action without manual intervention.

Measurable impact from day one

Immediate, quantifiable results — not months of implementation before you see

VALUE.

90%

Less time
reviewing contracts

3–5x

More SLA credits

Fewer missed
deadlines

\$2M+

Credits recovered
across customers

● **For Legal**

Days of contract review compressed to minutes. Automated risk scoring across 10 categories. Portfolio-wide semantic search.

● **For Procurement**

Real-time SLA monitoring. Detect breaches the moment they happen. Recover every service credit owed.

● **For Finance**

Track every obligation and deadline. Detect auto-renewal traps before they trigger. Understand true financial exposure.

**Increase return on contract base
by 3-6%**

Developed by seasoned industry experts

**Increase renewal rate
and
Contract extensions**

Trusted Transparent relationship

Avoid transition costs

Improve margins (decrease costs)

Pro-actively action commitments and avoid omissions

Increase revenue

**Growth of add-on business within the existing customer
portfolio**
