

Evaluator

The Agentic Contract Intelligence Platform

Replacing manual contract oversight with AI-Native, Human-in-the-Loop Post-Signature Governance

Document Type	Business Plan & Market Analysis
Prepared	April 2026
Version	1.0 — Confidential
Target Market	Mid-Market & Enterprise Organizations (all industries)
Technology	FastAPI · PostgreSQL · ChromaDB · GPT-4o · Agentic AI · React

EXECUTIVE SUMMARY

Executive Summary

Evaluator is a B2B Contract Intelligence platform purpose-built to solve the most expensive, invisible problem in enterprise operations: the post-signature contract management gap. While \$1.24B is spent annually on CLM software that manages contracts before they are signed, the operational value locked inside executed contracts — obligations, SLAs, renewal terms, compliance requirements — is left unmonitored, untracked, and unenforced. The result: 9.2% of annual revenue lost to poor contract management, \$2T in global value leakage, and legal teams buried in reactive firefighting instead of strategic governance.

Evaluator attacks this problem with a nine-agent AI extraction pipeline that reads every uploaded contract and automatically extracts clauses, obligations, SLAs, risks, renewals, and compliance requirements — then bridges them into a live governance layer that monitors performance, detects breaches, calculates penalties, and manages business relationships. This is not a document repository with search. It is an autonomous contract operations system that takes ownership of the post-signature lifecycle from upload to obligation fulfillment.

\$2.18B CLM Market 2025 (CAGR 17.1%) Source: Mordor Intelligence	\$7.6B AI in Legal Market 2032 (CAGR 28.5%) Source: Grand View Research	9.2% Annual Revenue Lost to Poor Contract Management Source: WorldCC/IACCM	71% Companies Still Using Manual Contract Processes Source: Deloitte Legal Tech Survey
--	---	--	--

The Strategic Insight: Icertis (\$2.8B valuation) owns the enterprise pre-signature workflow. DocuSign owns the signature. Ironclad owns the legal workflow UX. But nobody owns what happens after the contract is signed — the 3-to-10-year operational lifecycle where obligations must be met, SLAs must be tracked, renewals must be caught, and relationships must be governed. Evaluator owns that gap — and it's where all the money is lost.

SECTION 1 — THE PROBLEM

The Problem: Four Compounding Crises

1.1 The Post-Signature Black Hole

Every enterprise signs thousands of contracts per year. The moment the signature is applied, the contract enters a black hole. It is stored in a shared drive, a legacy repository, or a CLM system designed for pre-signature workflows — and nobody monitors what was promised. The average Fortune 500 company manages 20,000–40,000 active contracts. Each contains obligations with deadlines, SLAs with penalty thresholds, renewal terms with notice periods, and compliance requirements with regulatory consequences. A single missed auto-renewal notice can lock an organization into an unfavorable contract for years. A single untracked SLA breach can waive penalty recovery rights worth millions.

1.2 The Legal Team Capacity Crisis

In-house legal teams are chronically understaffed relative to their contract volume. The average corporate legal department spends 50% of its time on contract-related work, yet manages only 10% of contracts proactively. The remaining 90% sit unmonitored until a crisis — a missed renewal, a compliance audit, a vendor dispute — forces reactive attention. Law departments are growing at 1.5% annually while contract volume grows at 8–12%. The gap is widening, and hiring cannot close it.

1.3 The Fragmented Tool Landscape

Most organizations use 3–5 disconnected systems to manage their contract lifecycle: a CLM for authoring, a signature platform, a shared drive for storage, spreadsheets for obligation tracking, and email for vendor communication. No single system provides a unified view from contract terms to operational performance. Data lives in silos. When a procurement team wants to know if a vendor is meeting its SLA commitments, they must manually cross-reference the contract text, the service delivery data, and the performance history — a process that takes days and is repeated hundreds of times per year.

1.4 The Relationship Governance Deficit

Contracts define business relationships, but no CLM system measures whether those relationships are healthy. Organizations track KPIs in dashboards, vendor performance in scorecards, and stakeholder satisfaction in surveys — all in separate systems with no connection to the underlying contract commitments. There is no feedback loop between what was promised in the contract and how the relationship is actually perceived by both parties. When a vendor relationship deteriorates, the warning signs are invisible until they become contractual disputes.

Crisis	Current State	Impact	Evaluator Solution
Post-Signature Black Hole	Contracts stored and forgotten after signing	9.2% revenue leakage, missed renewals, untracked obligations	9-agent AI extraction pipeline; live obligation/SLA monitoring
Legal Capacity Gap	50% of legal time on contracts; 90% unmonitored	Reactive firefighting, compliance risk, missed deadlines	Automated extraction and governance; human oversight only for exceptions
Fragmented Tools	3–5 disconnected systems per organization	Manual cross-referencing, no unified view, data silos	Single platform: upload → extract → monitor → govern → report
Relationship Deficit	No connection between contract terms and relationship health	Vendor disputes, satisfaction gaps, no early warning	Governance Bridge: contracts auto-create orgs, KPIs, perception scoring

SECTION 2 — THE SOLUTION

The Solution: Agentic Contract Intelligence

Evaluator replaces manual post-signature oversight with a four-layer technology stack that reads contracts, extracts intelligence, monitors performance, and governs business relationships — with humans in the loop for judgment and exception handling. This is not a contract repository with AI search bolted on. It is an autonomous operations platform that takes ownership of the post-signature life-cycle.

2.1 Layer 1: The Nine-Agent AI Extraction Pipeline

When a contract is uploaded, Evaluator’s Agent Squad processes it through nine specialized AI agents, each purpose-built for a specific extraction task. The pipeline runs in minutes, not days.

Agent	Role	Key Actions	Output
Metadata Extraction	Identifies parties, dates, values, contract type	LLM-powered parsing with counterparty cleaning, currency validation, template detection	Structured metadata for every contract
Clause Extraction	Extracts and classifies contract language	17+ clause types with semantic classification, section mapping, page-level highlighting	Searchable clause library across all contracts
Obligation Tracking	Identifies commitments with deadlines and parties	Deadline parsing (fixed, recurring, relative), party assignment, consequence extraction	Obligation register with RAG status tracking
SLA Extraction	Extracts metrics, targets, and penalties	Target values, warning thresholds, penalty calculations, measurement periods	SLA compliance dashboard with breach detection
Risk Detection	Assesses 10 risk categories	Content-weighted scoring across unlimited liability, weak termination, missing limitation	Portfolio risk dashboard with category breakdown
Renewal Monitoring	Detects auto-renewal and notice periods	Notice date calculation, renewal type classification, at-risk flagging	Renewal calendar with automated alerts
Schema Extraction	Extracts fields for 15 contract types	1,235 extractable fields across 133 sections (MSA, NDA, SOW, Employment, etc.)	Structured data competitive with enterprise CLM
Regulatory Extraction	Identifies compliance requirements	10 obligation categories, regulatory obligation tracking	Compliance gap detection dashboard
Intent Router	Routes user queries to specialized handlers		Conversational AI with auto-generated charts

Agent	Role	Key Actions	Output
-------	------	-------------	--------

5 structured query categories +
RAG-powered Q&A with LLM
visualizations

- **Parallel Processing:** All nine agents run concurrently, producing results in minutes per contract.
- **Observability:** Full Langfuse tracing for every LLM call — cost, latency, and quality metrics visible to operators.
- **Accuracy:** 90%+ extraction accuracy with progressive prefix matching for document highlighting.
- **Scale:** Tested on 600+ contracts simultaneously; designed for enterprise portfolios of 40,000+ contracts.

2.2 Layer 2: The Post-Signature Governance Engine

After extraction, Evaluator’s governance engine takes over the operational lifecycle:

- **SLA Monitoring:** Compare contracted vs. actual performance with automated breach detection and service credit calculation.
- **Obligation Tracking:** RAG status (Red/Amber/Green) for every obligation, with deadline alerts and compliance rate dashboards.
- **Milestone Tracking:** Project milestone health with variance alerts and escalation workflows.
- **Compliance Monitoring:** Industry-aware compliance gap detection against configurable rule sets.
- **Workflow Automation:** 14+ automated action types triggered by events (threshold breaches, deadline proximity, status changes).
- **Alert Lifecycle:** Full acknowledge → resolve → escalate → dismiss lifecycle with severity classification and trend analysis.

2.3 Layer 3: The Governance Bridge (Unique Capability)

No competitor has this. When Evaluator extracts contract intelligence, it doesn't stop at a dashboard. It automatically creates the operational governance structure:

- Contract upload **auto-creates** the counterparty organization.
- SLA extraction **auto-creates** KPI definitions with targets and thresholds.
- Obligation extraction **auto-creates** business relationship tracking.
- Gap detection **auto-creates** improvement points with action items.

This automated pipeline — from contract upload to relationship governance — eliminates the manual setup work that makes governance programs die in Excel spreadsheets.

2.4 Layer 4: Relationship Intelligence (Unique Capability)

Evaluator's Relationship Governance module measures the health of business relationships from both sides:

- **Internal Perception Scoring:** How your team perceives the vendor/partner relationship.
- **External Perception Scoring:** How the counterparty perceives the relationship (via external survey portal).
- **Perception Gap Analysis:** Automated severity classification when internal and external scores diverge.
- **Improvement Tracking:** Auto-generated improvement points with action items and owners.
- **Multi-Party Surveys:** Full survey lifecycle with template management and token-based external access.

This is the only CLM platform that measures relationship health from both perspectives and connects it to the underlying contract performance.

SECTION 3 — MARKET OPPORTUNITY

Market Opportunity

Evaluator addresses a precisely defined, underserved segment at the intersection of three large and growing markets: Contract Lifecycle Management, AI-powered Legal Technology, and Business Relationship Management.

3.1 Total Addressable Market (TAM)

\$2.18B CLM Software Market (2025, CAGR 17.1%) Mordor Intelligence	\$7.6B AI in Legal Technology (2032, CAGR 28.5%) Grand View Research	\$1.24B CLM Market Revenue 2025 Competitive Feature Comparison	\$21.5B Legal Tech Market 2027 Gartner
--	--	--	--

3.2 Serviceable Addressable Market (SAM)

Evaluator’s initial focus is mid-market and enterprise organizations with significant post-signature contract management needs: IT outsourcing, managed services, procurement-heavy industries, and regulated sectors. The SAM is concentrated in organizations with \$50M–\$5B in contracted spend — large enough to feel the pain of manual oversight, yet underserved by enterprise CLM vendors with 12–18 month implementations and \$100K+ deployment costs.

Customer Segment	Approx. Count	Annual CLM Spend Est.	Evaluator Target
SMB (<\$100M revenue)	~50,000	\$10K–\$50K/year	Self-serve SaaS tier
Mid-Market (\$100M–\$1B)	~12,000	\$50K–\$250K/year	Core revenue target
Large Enterprise (\$1B–\$10B)	~3,500	\$250K–\$1M/year	Enterprise managed service
Global Enterprise (>\$10B)	~500	\$1M–\$5M/year	Partnership/white-label

With 12,000 mid-market targets and a blended ACV of \$120,000, the SAM is approximately \$1.44B annually. At 5% market penetration over 5 years, the SOM (Serviceable Obtainable Market) is \$72M ARR — a credible, venture-backable target.

3.3 Why Now: The Post-Signature Inflection Point

Four forces are converging in 2026 to make this the optimal moment to launch:

- **Agentic AI maturity:** Gartner projects 40% of enterprise applications will include task-specific AI agents by 2026 — up from <5% in 2025. The infrastructure for production-grade nine-agent extraction pipelines now exists.
- **Post-signature awareness:** WorldCC/IACCM research showing 9.2% revenue leakage from poor contract management has finally reached C-suite awareness. CFOs are demanding visibility into contracted obligations.
- **CLM market consolidation:** Workday acquired Evisort, Haveli took majority stake in Sirion, Conga acquired PROS Holdings, Agiloft acquired Screens. The incumbents are focused on integration, creating a window for AI-native entrants.
- **Compliance complexity explosion:** ESG reporting mandates, AI governance requirements, data privacy regulations, and supply chain due diligence are multiplying the compliance obligations embedded in every contract. Manual tracking is no longer viable.

SECTION 4 — COMPETITIVE POSITIONING

Competitive Landscape & Positioning

4.1 The White Space: Post-Signature + Relationship Governance

Evaluator is designed to own the white space that every existing CLM vendor leaves unaddressed: what happens after the contract is signed, and whether the business relationship it governs is actually healthy.

Company	Role	Strength	Gap Evaluator Fills	Relationship
Icertis	Enterprise CLM Platform (Vera AI)	\$2.8B valuation; deep SAP/Workday integration	12–18 month implementations; no relationship governance	Complement (different segment)
DocuSign	Signature + IAM	Universal e-signature adoption; Iris AI	Bolt-on CLM; no post-signature monitoring	Complement (signature partner)
Ironclad	Legal Operating System	Best-in-class workflow UX; Rivet (6 agents)	Weak post-signature; no SLA monitoring	Complement (pre-signature)
Sirion	AI-Native Contract OS	Highest Gartner execution score; agentOS	Dense UI; no perception gap scoring	Direct competitor (post-signature)
Luminance	Autonomous Legal AI	AI-to-AI negotiation (Autopilot)	No post-signature management	Complement (negotiation)
Agiloft	No-Code CLM	Extreme customization; Screens acquisition	No relationship governance	Complement (no-code)
Conga	Revenue Lifecycle	PROS pricing intelligence; 1,400+ models	Less AI-native; no relationship governance	Complement (revenue focus)
Evaluator	Agentic Contract Intelligence + Relationship Governance	9-agent pipeline; governance bridge; perception scoring; unlimited users	IS the gap — owns post-signature + relationship health	Unique positioning

4.2 Competitive Differentiation Matrix

Dimension	Market Leader(s)	Evaluator Position
Pre-Signature (Authoring/ Negotiation)	Ironclad, Luminance, Icertis	Not implemented (deliberate focus choice)

Dimension	Market Leader(s)	Evaluator Position
Post-Signature Management	Sirion, Evaluator	Strong — SLAs, obligations, compliance, renewals, milestones
AI Extraction	Sirion, Evaluator, Conga	Strong — 9+ agents, 15 schemas, 1,235 fields
Governance Bridge	Evaluator	Unique — automated contract → org/relationship/KPI pipeline
Perception Gap Scoring	Evaluator	Unique — dual-perspective with severity classification
Unlimited-Users Pricing	Evaluator	Unique — no major CLM vendor offers this
Time-to-Value	Evaluator, Luminance	Fastest — upload to insights in hours, not months
LLM Observability	Evaluator (Langfuse)	Unique — no competitor offers comparable agent tracing

The Positioning in One Sentence: Every CLM vendor fights over who owns the workflow before the signature. Evaluator owns everything that happens after — where 9.2% of revenue is lost, where relationships succeed or fail, and where contracts either deliver their promised value or silently decay.

SECTION 5 — BUSINESS MODEL

Business Model

5.1 Revenue Architecture

Evaluator operates a three-tier SaaS model with **unlimited-users pricing** — a genuine market differentiator. While every competitor charges per seat (\$50–\$150/user/month), Evaluator charges per contract portfolio, eliminating the barrier to cross-functional adoption.

Tier	Product	Target Customer	Pricing Model	Est. ACV
Tier 1 Starter	Upload + AI Extraction + Basic Dashboards	SMB (<\$100M revenue), 1–2 departments	SaaS subscription per contract volume band. Unlimited users.	\$20K–\$60K
Tier 2 Professional	Full Platform — Extraction + Governance + Compliance + Workflows + Relationship Management	Mid-market (\$100M–\$1B), multi-department adoption	Annual contract based on portfolio size + per-analysis fee for deep extraction	\$80K–\$250K
Tier 3 Enterprise	Full Platform + Custom Integrations + Dedicated Success + SLA on AI Accuracy	Large enterprise (>\$1B), multi-BU deployment	Multi-year enterprise contract. Custom pricing + outcome-based bonuses	\$300K–\$1M+
Add-On Services	Integration Implementation, Contract Migration, Compliance Audit, Governance Workshop	All tiers	Project-based SOW, \$15K–\$100K per engagement	Variable

5.2 Unit Economics

The core economics are compelling because the AI extraction pipeline is a shared asset — built once, applied to every contract. Marginal cost per additional contract is dominated by OpenAI API costs (~\$0.30–\$0.80 per contract analysis), not human labor.

~82% Gross Margin (Tier 2/3 at scale) Post-automation of extraction pipeline	<12 mo Payback Period (Tier 2 Professional) Based on \$150K ACV, \$100K CAC	94%+ Target Net Revenue Retention Contracts never go away; portfolios grow	3–5x Expansion ARR Multiplier (Y1→Y3) Via department/BU expansion per customer
--	--	--	--

5.3 Go-to-Market Strategy

Evaluator will enter the market through three parallel channels, prioritized by speed of trust establishment:

- **Channel 1 — Direct Consultative Sales:** Target mid-market organizations in IT outsourcing, financial services, healthcare, and manufacturing (highest contract management burden). ICP: VP of Procurement, General Counsel, Chief Compliance Officer. Entry via free 90-day contract audit — upload your portfolio, see your risk exposure.
- **Channel 2 — Technology Partnerships:** Position Evaluator as the post-signature intelligence layer for existing CLM, ERP, and ITSM platforms. Certified integration with ServiceNow, Salesforce, and SAP creates a distribution channel where the platform vendor's sales team becomes Evaluator's sales team.
- **Channel 3 — Consulting & Advisory Partnerships:** Partner with Big 4 consulting firms and boutique legal operations consultancies who advise on contract governance. The Governance Bridge capability provides the automated infrastructure their governance frameworks have always lacked.

SECTION 6 — FINANCIAL PROJECTIONS

Financial Projections (5-Year)

The following projections assume a Series A raise of \$10M in 2026, with product launch in Q3 2026, first paying customers in Q4 2026, and a 30-month path to cash-flow breakeven.

Metric	2026 (Launch)	2027 (Y1 Full)	2028 (Y2)	2029 (Y3)	2030 (Y4)
ARR (End of Year)	\$0.6M	\$3.2M	\$9.5M	\$22M	\$45M
# Customers	4	18	48	95	170
Blended ACV	\$150K	\$178K	\$198K	\$232K	\$265K
Gross Margin %	52%	65%	74%	80%	83%
Headcount	15	35	65	110	165
Net ARR Retention	N/A	110%	116%	122%	125%
Cash Flow	-\$3.5M	-\$5.8M	-\$1.8M	+\$3.5M	+\$14M

6.1 Use of Funds (\$10M Series A)

Category	Amount	%	Key Activities
Product & Engineering	\$4.0M	40%	Enterprise integrations (ServiceNow, Salesforce, SAP); contract authoring module; visual workflow builder; SOC 2 certification
Sales & Marketing	\$2.5M	25%	Enterprise sales team (3 AEs); product marketing; industry conferences; free audit lead generation
AI & Data Science	\$1.5M	15%	Fine-tuned extraction models; accuracy benchmarking; private LLM deployment option; advanced analytics
Customer Success & Ops	\$1.0M	10%	Onboarding specialists; implementation team; technical support; contract migration tooling
G&A / Working Capital	\$1.0M	10%	Legal, finance, insurance, office infrastructure, 18-month runway buffer

SECTION 7 — EXECUTION ROADMAP

Execution Roadmap

Phase	Timeline	Key Milestones	Success Criteria
Phase 0: Foundation	Q2–Q3 2026	Incorporate; close pre-seed/seed (\$2M). Hire founding team (CTO, Head of Product, 2 senior engineers). Complete SOC 2 Type I. Finish enterprise integration framework.	Platform handles 10,000+ contracts. 3+ pilot customers onboarded. SOC 2 Type I certified.
Phase 1: Pilot	Q4 2026– Q1 2027	Sign 3–5 pilot customers (Tier 2 Professional). Conduct free 90-day contract audits. Deploy governance bridge at pilot sites. Collect NPS and time-savings data.	Zero critical bugs. Documented 50%+ reduction in manual contract review time. 2+ pilots convert to paid.
Phase 2: Scale	Q2–Q4 2027	Launch Tier 1 self-serve SaaS. Sign first Tier 3 enterprise customers. Launch ServiceNow and Salesforce integrations. Build visual workflow UI. Close Series A (\$10M). Reach 18+ paying customers.	\$3M+ ARR. Integration partnerships signed. Net Revenue Retention >110%.
Phase 3: Platform	2028– 2029	Launch contract authoring module. Expand to 10+ enterprise integrations. Build AI redlining. Launch industry-specific compliance packs. Evaluate Series B (\$25M+).	\$22M+ ARR. 95+ customers. Path to cash-flow positive visible in 18 months.
Phase 4: Exit / Scale	2030+	Full CLM lifecycle coverage. International expansion (UK, EU, APAC). Private LLM deployment for regulated industries. Strategic M&A opportunities.	\$45M+ ARR. Strategic acquisition discussions. Potential IPO consideration at \$500M+ valuation.

SECTION 8 — TEAM & RISKS

Team Architecture & Risk Mitigation

8.1 Founding Team Requirements

Evaluator’s differentiation is the rare combination of deep contract management domain knowledge, enterprise AI engineering capability, and relationship governance design. The founding team must cover four critical competencies:

Role	Background Required	Why Critical
CEO / Chief Strategy Officer	10+ years in enterprise software; legal tech, procurement, or GRC domain. Consulting or CLM vendor experience.	CLM is a trust sale. The CEO must have credibility with General Counsel, CPOs, and CCOs — and the ability to navigate enterprise procurement cycles.
CTO / Chief Architect	Full-stack with AI/ML depth; FastAPI or similar async Python frameworks; PostgreSQL; vector databases; LLM orchestration	The nine-agent extraction pipeline is the product. Technical depth must match the complexity of multi-agent orchestration and enterprise-grade data isolation.
Head of Product / Domain Expert	10+ years in contract management, legal operations, or procurement. Former CLM user or implementer.	This person IS the domain knowledge that Evaluator digitizes. They validate agent accuracy, define governance workflows, and serve as the ultimate human-in-the-loop authority.
VP of Revenue / Partnerships	Enterprise SaaS sales in legal tech, procurement tech, or GRC. Existing relationships with consulting firms and CLM ecosystem partners.	Distribution in legal tech requires trust. A VP who can open doors at mid-market organizations is worth 18 months of cold outreach.

8.2 Key Risks and Mitigations

Risk	Likelihood	Impact	Mitigation
Icertis/Sirion add relationship governance	Medium	High	First-mover advantage on governance bridge + perception scoring. By the time incumbents build it, Evaluator has 2+ years of customer data and workflow refinement.
Enterprise sales cycles extend beyond 12 months	High	Medium	Enter via free 90-day contract audit — delivers immediate value before contract negotiation. Consulting partner channel accelerates trust.
AI extraction accuracy falls below expectations	Medium	Very High	Human-in-the-loop review for all critical extractions. Langfuse observability for continuous accuracy monitoring. Customer-specific tuning during onboarding.

Risk	Likelihood	Impact	Mitigation
OpenAI API costs increase significantly	Medium	Medium	Multi-model architecture (GPT-4o, Claude, fine-tuned open-source). Private LLM deployment option for enterprise tier. Cost per contract analysis already <\$1.
CLM market consolidation eliminates whitespace	Low	High	Relationship governance capability has no CLM analog. Even if acquired, the governance bridge is a feature any acquirer would want. Position for strategic acquisition as a positive outcome.
Compliance/security certification delays	Medium	Medium	Begin SOC 2 Type I in Phase 0. Hire compliance-experienced security lead. Use established infrastructure (AWS, PostgreSQL) with documented controls.

SECTION 9 — THE INVESTMENT CASE

The Investment Case

Evaluator is not a speculative bet on AI in legal. It is a solution to a structural operational problem in a \$2.18 trillion managed-services economy where every business relationship is governed by a contract, and 9.2% of the value in those contracts is lost to poor post-signature management.

Why This Business Wins:

- **Structural tailwind:** 71% of organizations still use manual contract processes. Digital transformation in legal operations is 5–10 years behind finance and HR. The adoption curve is early and accelerating.
- **Ecosystem fit:** Every CLM vendor focuses on pre-signature. Every signature vendor focuses on execution. Every ERP vendor focuses on financial data. Evaluator is a complement to all of them — owning the post-signature intelligence layer that none of them provide. This makes partnership the path of least resistance.
- **Unique capabilities as moat:** The Governance Bridge (automated contract → organization → KPI → relationship pipeline) and Perception Gap Scoring (dual-perspective with severity classification) have no competitive analog. Once deployed, switching to a competitor means losing the entire governance infrastructure.
- **Net Revenue Retention >120%:** Contracts don't go away. Portfolios grow. Departments adopt. BU expansion is natural. The unlimited-users pricing model eliminates seat-cost friction for cross-functional adoption. NRR exceeds 120% because contract portfolios compound.
- **Regulation is the contract:** Unlike SaaS products that compete on features, Evaluator's value proposition is underwritten by the contracts themselves. As long as organizations sign contracts with obligations, SLAs, and renewal terms, Evaluator is needed. The addressable problem is non-discretionary.
- **Acquisition optionality:** Icertis (\$2.8B valuation), SAP, ServiceNow, Salesforce, and Workday all have strategic reasons to own post-signature contract intelligence. A 5x revenue exit at \$225M ARR implies a \$1.1B+ transaction by 2031.

The Core Thesis in One Sentence: Every organization in the world signs contracts that contain promises — obligations, SLAs, deadlines, compliance requirements — and the tools that manage those contracts were designed to get them signed, not to ensure the promises are kept. Evaluator is the company that was built to close that gap, at exactly the moment when agentic AI makes it possible to do so at scale.
