## 1. ABOUT THIS DOCUMENT

### 1.1 CONTENT

This document presents the concepts of Evaluetor and the Value contributions it brings to your business. Additionally the architecture of the system is presented on a very high level.

### 1.2 READING GUIDE

The chapters in this document are relatively independent. So feel free to start reading the chapter that is most important to you. When interested, you can read the other chapters to complete the picture.

Concepts of Evaluetor: The business perspective and descriptions on the Management terminology and how it is applied in Evaluetor

Value Contributions: A high level indication on the possible contributions of Evaluetor for your organisation

Access and Usage: An impression of practical things you need if you want to Use Evaluetor

Technology: A brief overview of how the system is build. Even non-technical people will understand the advantage.

### 1.3 OBJECTIVE

The Objective of this document is to give managers an understanding how and where the use of Evaluetor will make a contribution to their business.

## 2. CONCEPTS OF EVALUETOR

### 2.1 BUSINESS PERSPECTIVE

#### 2.1.1 SERVICE EXCELLENCE

Evaluetor is an application that helps managers of organisations to make business relationships transparent, measurable and actionable. Evaluetor focusses on the Governance and the management of expectations rather than the services itself.

The application is embedded in Microsoft's collaboration tool SharePoint. SharePoint offers a wealth of office and communications functions for people that need to work together in teams. Evaluetor adds to that by offering business functionality for the management of relationships, its contracts and services. Evaluetor is built to share and work in cross-organisational teams. The main stream of functionality concentrates on the identification and closing of gaps between the intentions and perception of officers in organisations, the obligations as they are defined in contracts and the reality of the delivery and its reporting. It stimulates the increase of mutual values in relationships between the involved organisations and drives to Service Excellence.

#### 2.1.2 BUSINESS RELATIONSHIP AND CONTRACT GOVERNANCE

Modern organisations are often organised in silos and optimized processes. Each silo has its own core system for their main processes. Most common interfaces are resolved by application integration solutions. Data on business and process silos is gathered and reported using Business Intelligence Solutions.

While the service personnel have no trouble operating in its own optimized environment. The Client deals with each silo depended on the issue/desire he has while each interaction influences the business partner's perception. For example a salesman is confronted with negative delivery issues. Today's business demand requires a much more integrated view on how the client is influenced in all different interactions. Evaluetor is designed as an inter-organisational application helping managers of the business partners to control the relationship aimed to maximum the mutual value.

## 2.2 DEFINITIONS

Before getting started with Evaluetor it is important to understand the main definitions. By understanding the definitions you will develop knowledge on how the functionalities are structured and can help to manage your business relationships.

### 2.2.1 ORGANISATION

Evaluetor uses the organisation as the main anchor for all activities and data. You must define your own organisation. You can register the organisational units and officers that do have a role in its management.

One can also define companies. Companies represent the legal entities used in contracts.

**Organisation:** A social unit of people that is structured and managed to meet a need, or to pursue collective goals. All Organisations have a management structure that determines relationships between the different activities and the members, and subdivides and assigns roles, responsibilities, and authority to carry out different tasks. Organisations are open systems--they affect and are affected by their environment.

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

### 2.2.2 BUSINESS RELATIONSHIP

In Evaluetor we implement business relationships as an association between organisations. We do further

**Business Relationship:** An association between individuals or companies entered into for commercial purposes and sometimes formalized with legal contracts or agreements.

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

qualify relationships as Client or Supplier relationships. In a client relationship the role of your own organisation would be the one providing e.g. Services. In a Supplier

relationship your own organisation would be the client (or principal) receiving Services. The Business Relationship is the item where multiple contracts between the Provider and Principal organisations can be administrated and controlled. In order to measure Perceptions, Key Performance Indicators can be defined and scored by officers of both organisations. Note that Evaluetor supports complex Organisations where Business Relationships may also be defined between Business Units in an enterprise.

### 2.2.3 CONTRACT

Contracts can be defined within business relationships and between companies. Contracts generally are

**Contract:** A voluntary, deliberate, and legally binding agreement between two or more competent parties. Contracts are usually written but may be spoken or implied, and generally have to do with employment, sale or lease, or tenancy.

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

described in a document (with appendices). Evaluetor enables to control the documents structure and provides a common storage space for contract documents.

#### 2.2.4 COMMITMENTS

Using Evaluetor, commitments that are defined in the contracts can be monitored. Commitments can be Services, Projects or more general Terms and Conditions.

**Project:** A Planned set of interrelated tasks to be executed over a fixed period and within certain cost and other limitations.

**Service:** A valuable action, deed, or effort performed to satisfy a need or to fulfill a demand.

**Terms and Conditions:** General and special arrangements, provisions, requirements, rules, specifications, and standards that form an integral part of an agreement or contract.

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

#### 2.2.5 RISK

Evaluetor assist organisations to control risks, by offering Risk Assessment. In the Risk Assessment the commitments are evaluated against the organisation's contracting policies. Risk issues can be logged and mitigation actions can be logged with Red/Amber/Green indicators.

**Risk:** A probability or threat of damage, injury, liability, loss, or any other negative occurrence that is caused by external or internal vulnerabilities, and that may be avoided through preemptive action.

**Finance:** The probability that an actual return on an investment will be lower than the expected return. Financial risk is divided into the following categories: Basic risk, Capital risk, Country risk, Default risk, Delivery risk, Economic risk, Exchange rate risk, Interest rate risk, Liquidity risk, Operations risk, Payment system risk, Political risk, Refinancing risk, Reinvestment risk, Settlement risk, Sovereign risk, and Underwriting risk..

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

## 2.2.6 GOVERNANCE

Evaluetor supports the Governance over Business Relationships by the possibility to define (Governance) Teams.

**Governance:** Establishment of policies, and continuous monitoring of their proper implementation, by the members of the governing body of an organisation. It includes the mechanisms required to balance the powers of the members (with the associated accountability), and their primary duty of enhancing the prosperity and viability of the organisation.

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

These teams are staffed with Officers from the involved organisations. Control activities can be defined on Relationship and on Contract Level. Governance teams will execute Control Activities within the Relationship. Responsibilities are assigned to teams in order to bring contractual rights/duties/obligations/activities to their attention and monitor its delivery and progression in order to safeguard Performance for involved parties. The setting of Key Performance Indicators (KPI's) for the relationship and measuring against them on a regular basis are important activities in the management of a relationship. KPI's are often high level and not measurable in absolute figures. But they are certainly measurable in relative sense, and therefore suitable to measure perceptions of people. KPI measurements can be compared with each other but also against the Contract Fulfilment. Remember that people's expectations are not stable but progress/change based on experience, new ideas and changed requirements. These should lead to upgrades of the formal contracts to better reflect to the client's business changes.

**Team:** A group of people with a full set of complementary skills required to complete a task, job, or project. Team members (1) operate with a high degree of interdependence, (2) share authority and responsibilities for self-management, (3) are accountable for the collective performance, and (4) work toward a common goal and shared rewards(s). A team becomes more than just a collection of people when a strong sense of mutual commitment creates synergy, thus generating performance greater than the sum of the performance of its individual members

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

**Control Activities:** Management policies and procedures applied in (1) achieving a firm's objectives, (2) protection of its assets, and (3) measurement of its performance.

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

**Performance:** The accomplishment of a given task measured against preset known standards of accuracy, completeness, cost, and speed. In a contract, performance is deemed to be the fulfillment of an obligation, in a manner that releases the performer from all liabilities under the contract.

*Source: [BusinessDictionary.com](http://BusinessDictionary.com)*

### 3. VALUE CONTRIBUTION

The main value of Evaluetor is based on the improvement of business relationships by sharing perceptions and facts. By doing this the value obtained from the relationship can be maximised for both organisations. The structure of the Evaluetor enables transparency of real time status information on all levels so that a lot of redundancy of data, email communications and misperceptions are avoided. Also time spend on creation of status reports on different levels is reduced. By using Evaluetor to manage your Client and Supplier relationships contributions can be made in the following areas;

| Values                                   | Benefits for Organisations in a Client Role                                                 | Benefits for Organisations in a Provider Role              |
|------------------------------------------|---------------------------------------------------------------------------------------------|------------------------------------------------------------|
| <b>Management effectiveness</b>          | Reduced overhead of status reporting                                                        |                                                            |
|                                          | Improved control (governance) and compliance                                                |                                                            |
|                                          | Seamless transfer of contract content understanding between contracting and delivery phase. |                                                            |
| <b>Long term relationships / loyalty</b> | Avoid cost of transition to new provider (10-20%)                                           | Reduce cost of sales/renew                                 |
|                                          | Reduce/Avoid Cost of renewal (25%)                                                          |                                                            |
|                                          |                                                                                             | Client Reference Value                                     |
| <b>Effectiveness and Performance</b>     | Avoid cost of failure                                                                       | Avoid cost of Failure (5-10%)                              |
|                                          | Increased value of Contracted Services                                                      | Increased return on contract base ( 5%)                    |
|                                          | Clear status on fulfilment                                                                  |                                                            |
|                                          | Automatic Real time Status reporting                                                        |                                                            |
| <b>Business Alignment</b>                | Reduced cost and improved speed of business changes                                         | Reduced cost of Portfolio innovation                       |
|                                          |                                                                                             | Improve revenue for cross sell and add on projects (6-10%) |

*Note: Organisations will benefit on both sites if they are both a Client and a Provider Role.*

### 3.1 THE OFFICER'S ORGANISER

Evaluetor helps to organise the day to day actions of Officers involved in the Management and Governance of business relationships. It helps to keep track of commitments in accounts where multiple contracts and many issues may be asking for attention.

#### 3.1.1 BUSINESS LEADER

Overall dashboards with real time status of activities in will help Business managers keep a view on his/her responsibilities such as Client satisfaction.

### 3.1.3 TEAM MEMBERS

Team members are supported with automatic Team Agenda's, where all activities are grouped in the agenda subjects with latest status. Per activity the status of deliverables and control are visible. Notes can be entered directly. Status is automatically rolled up to account and relationship level.

### 3.2 MANAGING EXPECTATIONS

Evaluetor helps to manage the Value Chain; it helps to monitor the expectations and reality of performance of all parties that are involved. The application consolidates details from different areas of the relationship, to provide insight in perceptions and status. By comparing these, Gaps can be identified.

The identified Gaps are guides for change and the improvement of business alignment. It leads to stable and long term relationships and therewith reduces cost and risks for both parties in the relationship.

### 3.3 IMPROVEMENT PLANNING

Evaluetor's Improvement Point Analysis helps managers to identify improvement by ranking KPIs scores against priorities. Area's for improvements can be recognized and evaluated in order to define appropriate corrective actions. These often lead to service improvements or contract changes to better address the business requirements.

This process drives;

- Identifying actionable improvement recommendations
- Continuous Improvements/ innovation
- Improving effectiveness and performance

### 3.4 GOVERNANCE

Evaluetor ensures complete control over all contractual obligations. By defining clear responsibilities and delegation to teams the completeness of the management control can be verified

Each commitment can be assigned to a responsibility area and evaluated by a Red/Amber/Green Status.

#### CONTRACT DELIVERY

| NOTE DATE   | LABEL     | DESCRIPTION                                                                                                                | RAG |
|-------------|-----------|----------------------------------------------------------------------------------------------------------------------------|-----|
| 27-mei-2013 | Gereed    | The Application is successful installed on the mobiles of a selected group of users. They will feed back their experience. |     |
| 06-jun-2013 | status    | All issues resolved                                                                                                        |     |
| 12-jun-2013 | Problems! | Trouble in the development team coordination with testing; Testing is delayed                                              |     |
| 30-jun-2013 | gereed    | Delivered an accepted                                                                                                      |     |

Actions/events can be attached to the commitment providing latest status and to proof compliance.

As all commitments are defined in Evaluetor (during the contracting phase), seamless handover between responsible Officers is guaranteed.

### 3.5 RISK CONTROL

Commitments can be evaluated against the organisations contracting policies, and risk issues can be monitored on its mitigation actions and status.

#### COMMITMENTS & RISK

| COMMITMENT          | RISK                   | POLICY INDICATOR | MESSAGE                   |
|---------------------|------------------------|------------------|---------------------------|
| Mobile APP Delivery |                        |                  | No Risk Evaluation Done   |

|                                           | Total                    |             | 1                  |                         | 0           |                            |

- Are documents signed?
- Any changes made in commitments after the signing?
- Are all commitments covered in a document?

This analysis helps to protect parties against contractual risks.

## **4. ACCESS AND USAGE**

Evaluator is a cloud solution, available through the internet by using the browser on your end user device. To use Evaluetor the organisation needs to subscribe. Each subscribed organisation gets its own private Workspace. Each user needs to have an account and must be authorized to access and use the relevant workspaces and Evaluetor functionality.

### **4.1 SECURITY**

User accounts are password protected. All workspaces, document and functions libraries are protected by user (group) access authorization. All communication between the user device and the Evaluetor system is secured by a Security Certificate (SSL) and data encryption.

### **4.2 OFFICE INTEGRATION**

Evaluetor is built on Microsoft products. Documents on the workspaces can be easily maintained by your standard Microsoft office applications.

### **4.3 INTEGRATED REPORTING**

An integrated reporting engine allows to create online reports. Reports can be viewed in your browser and can easily be loaded into other applications or printed. Additional, exports in various formats are available.

## 5. TECHNOLOGY

### 5.1 OVERVIEW

Evaluator is a cloud solution, available through the internet by using the browser (i.e. Internet Explorer, Chrome, and Firefox) on your end user device. (i.e. PC, laptop, tablet or phone).

The system is completely built on Microsoft products.

### 5.2 COLLABORATION AND DOCUMENT MANAGEMENT

Evaluator is embedded in Microsoft's collaboration platform SharePoint.

SharePoint comprises a multipurpose set of Web technologies backed by a common technical infrastructure. By default, SharePoint has a Microsoft Office-like interface, and it is closely integrated with the Office suite. The web tools are designed to be usable by non-technical users. SharePoint can be used to provide intranet portals, document & file management, collaboration, social networks, extranets, websites, enterprise search, and business intelligence. It also has system integration, process integration, and workflow automation capabilities.

### 5.3 EVALUETOR WEBPARTS SOLUTION

Evaluetor functions are implemented through Evaluetor WebParts embedded in Sharepoint webpart pages.

The Evaluetor Web parts communicate through Web services with the Evaluetor Data Base. When Web parts are used in a page, the specific business function must be specified in its properties. Web parts can be connected to each other to pass data.

### 5.4 FUNCTION CONFIGURATION

The function configuration is a facility that offers great flexibility. The function configurator contains all functional setting that is used by the web part, such as:

- The database where the procedures and data can be found
- The allowable actions (List/View/Add/Change/Delete)
- Fields to be used per action
- Customized field names, tooltips and formats

### 5.5 APPLICATION INTEGRATION

Evaluetor is designed to easily integrate with other business applications .

#### 5.5.1 ON PAGE INTEGRATION

Different options exist to access other applications. URL links allow to link to other applications on browser level. Foreign websites (web enabled applications) can be framed in on the SharePoint pages using the Page Viewer web part.

Access data from foreign applications through Evaluetor web parts is a more advanced option that is available.

#### 5.5.2 RESULT CONNECTORS

It's fairly easy to interact with other applications through the use of the standard web services concept. By use of this facility almost all basic add/update action can be triggered.

## APPENDIX A. EXAMPLE OF A CLIENT DASHBOARD

Using the Webpart architecture, pages to support business functions can easily be created or customized. Below is an example of a Client Account manager's dashboard for a service organisation:
